

Digital Performance *Report*

The first forty days of access.framontmanagement.com — traffic, audience quality, product interest and the path from visitor to registered investor.

REPORTING PERIOD

9 July – 17 August 2026

PROPERTY

GA4 · 544861486

TIME ZONE

Europe/Malta

COVERAGE

Since measurement went live

DATA STREAM

G-YRE5XX3RN2 · Web

ISSUED

17 August 2026

A small, serious audience — and a funnel that stops one step before the finish line

In its first forty days of measurement the site drew **64 visitors** across **118 sessions**. That is a small sample, so read the percentages as direction, not precision. What the sample says is consistent and useful: the people who arrive are genuinely engaged, they concentrate on two products, and almost none of them finish registering.

64 VISITORS all first-time	118 SESSIONS 1.8 per visitor	4m 40s AVG. SESSION vs ~1m typical	86% ENGAGEMENT RATE 13.6% bounce
479 PAGE VIEWS 4.1 per session	16 VIEWED A PRODUCT 25% of visitors	5 STARTED REGISTRATION 7.8% of visitors	2 COMPLETED 3.1% of visitors

THE FOUR THINGS WORTH ACTING ON

1 • ETI IS THE MAGNET WITH NO HOOK

ETI is the most-viewed product — **42 product views from 11 people**, more than double AMC — yet it produced **zero gate impressions and zero registration starts**. The strongest source of demand has no conversion mechanism attached to it.

2 • REGISTRATION LEAKS AT THE LAST STEP

11 registration starts became 2 completions. Five people began, two finished. The interest is real and it is being lost inside the form, not before it.

3 • A QUARTER OF THE TRAFFIC IS YOUR OWN TEAM

Malta accounts for **28 of 118 sessions (24%)** from just 6 people — consistent with internal use. A further 25 visitors from Amsterdam and Dublin show a one-session, no-engagement pattern typical of cloud infrastructure. The genuine external audience is closer to **~30 people**.

4 • TRAFFIC IS FADING, BECAUSE NOTHING IS FEEDING IT

Weekly sessions fell from 33 (mid-July) to 3 in the final partial week, and **no activity at all was recorded after 14 August**. There is no referral, paid, social or email traffic — only direct visits and a handful of organic searches.

Daily trend since measurement went live

Every day since the data stream was created on 9 July. Eight days recorded no traffic at all, including the last three days of the period.

The 13 July spike (16 sessions, 82 page views) and the 22 July page-view spike (65 views from 7 sessions) are single-day events driven by a handful of people moving through many product screens — they are depth of browsing, not a rise in audience.

THE SAME DATA, WEEKLY

WEEK	SESSIONS	VISITORS	PAGE VIEWS	VIEWS / SESSION
Jul 9–15	29	23	146	5.0
Jul 16–22	33	29	141	4.3
Jul 23–29	29	22	91	3.1
Jul 30–Aug 5	9	5	26	2.9
Aug 6–12	16	13	64	4.0
Aug 13–17*	3	2	11	3.7

*13–17 August is a partial week; 15, 16 and 17 August recorded no traffic. The three full weeks from 9–29 July averaged 30 sessions per week; the two most recent full weeks averaged 12.5 — a decline of roughly 58%.

Two channels, and one of them is mostly you

All 118 sessions arrived through just two channels. There is no referral, paid, social, email or affiliate traffic in the entire period — the site is currently discovered by people who already know the address.

CHANNELS

CHANNEL	SESSIONS	VISITORS	ENGAGED	AVG. SESSION
Direct	66	55	83%	4m 05s
Organic Search	52	10	90%	5m 25s

SOURCES

SOURCE / MEDIUM	SESSIONS	VISITORS	ENGAGEMENT RATE
(direct) / (none)	66	55	83%
google / organic	41	9	88%
bing / organic	11	1	100%

READ THE ORGANIC NUMBER CAREFULLY

Organic Search shows 52 sessions but only **10 distinct people** — 5.2 sessions each, against 1.2 for direct traffic. Eleven of those sessions come from a single Bing user. This pattern is far more consistent with repeat internal or SEO-monitoring visits than with 52 prospective investors finding you on Google.

NEW VS. RETURNING

VISITOR TYPE	SESSIONS	VISITORS	SHARE OF SESSIONS	ENGAGEMENT RATE
New	64	64	54%	84%
Returning	52	10	44%	92%
Not set	3	—	2%	—

Ten returning people generate 44% of all sessions — a very small group carries the activity.

THE CHANNELS THAT RECORDED NOTHING

CHANNEL	SESSIONS	WHAT IT WOULD TAKE
Referral	0	Links from partner, custodian or industry-association sites
Organic Social	0	A LinkedIn presence posting the Insights material
Paid Search	0	Bids on ETI, AMC and structured-product terms
Paid Social	0	LinkedIn targeting by job title, firm type and geography
Email	0	A tagged newsletter or deal alert to the existing contact base
Cross-network / Display	0	Retargeting the visitors who viewed a product but never registered

For an audience defined by profession rather than search behaviour, referral and LinkedIn are the largest gaps.

How many of the 64 are actually prospects?

With a sample this small, knowing who the visitors are matters more than counting them. Location and session patterns separate the genuine audience from internal use and automated traffic.

WHERE VISITORS ARE

CITY	COUNTRY	VISITORS		SESSIONS	SESS./VISITOR
Amsterdam	Netherlands	13		13	1.0
Dublin	Ireland	12		12	1.0
Milan	Italy	6		7	1.2
Trezzano sul Naviglio	Italy	4		4	1.0
Venice	Italy	4		4	1.0
Swieqi	Malta	4		21	5.2
Udine	Italy	2		7	3.5
Mosta	Malta	2		7	3.5
Greece (city not set)	Greece	2		5	2.5
Ashburn, VA	United States	2		2	1.0

Top ten locations of 33 recorded. Italy is the largest genuine market by visitor count once the cloud-hosting locations are set aside.

ESTIMATING THE REAL AUDIENCE

SEGMENT	VISITORS	SESSIONS	WHY
Malta (Swieqi, Mosta)	6	28	4.7 sessions each — consistent with the Framont team's own use
Amsterdam & Dublin	25	25	Exactly one session each; major cloud-hosting hubs
Ashburn, Virginia	2	2	The largest concentration of data centres in the world
Everyone else	~31	~63	Italy, Greece, Luxembourg, Switzerland and the remaining locations

WHAT THIS MEANS FOR EVERY NUMBER IN THIS REPORT

Roughly **half the recorded visitors are not prospective investors**. The engagement figures are flattered by internal use (long, repeated sessions) and depressed by automated traffic (single, empty sessions). Until an internal-traffic filter and bot exclusion are in place, treat the totals as an upper bound and the funnel — which only counts people who actually opened a product — as the reliable part of this report.

By browser, Windows with Chrome or Edge accounts for 75% of sessions — the corporate desktop profile — though 18 of those Edge sessions come from just 2 people, another repeat-visitor pattern.

ETI and AMC hold attention; everything else is a glance

The site is a single-page application, so every product screen is recorded on the same URL and separated by page title. Ranked by engaged time per visitor, the picture is clear.

PRODUCT SCREENS

SCREEN	VIEWS		VISITORS	ENGAGED TIME / VISITOR
Framont Access — home	185		59	0m 12s
ETI	81		21	0m 51s
AMC	67		16	1m 15s
Deals	44		16	0m 27s
Fondi (IT)	40		9	0m 51s
Funds (EN)	29		12	0m 33s

AMC commands the most attention per person (1m 15s), followed by ETI (50s) — against 12s on the home screen. These two products are what the audience actually came to understand.

ITALIAN MATTERS MORE THAN THE TRAFFIC SUGGESTS

The Italian funds screen (*Fondi*) drew 40 views against 29 for the English *Funds*, and **11 people manually switched language** (15 switches). Italian is roughly a third of the audience but has to ask for itself.

INSIGHTS ARTICLES

PAGE	VIEWS		VISITORS
/articles/ — Insights hub (EN)	13		12
/articles/it/ — Insights hub (IT)	12		4
/articles/it/cos-e-un-eti.html	3		2
/articles/it/amc-certificati-gestione-attiva.html	2		2
/articles/amc-actively-managed-certificates.html	1		1
/articles/it/valutare-strategie-sistematiche.html	1		1
/articles/what-is-an-eti.html	1		1

Insights accounts for **33 of 479 page views (6.9%)** — 25 to the two hubs, 8 to the five articles. One reader spent 2m 54s on “What Is an ETI?”: a distribution problem, not a quality one.

DEVICES

DEVICE	SESSIONS	SHARE	VISITORS	ENGAGED	AVG. SESSION
Desktop	98	83%	50	87%	4m 55s
Mobile	19	16%	13	84%	2m 14s
Tablet	1	1%	1	100%	26m 23s

Desktop suits an institutional audience; mobile sessions last less than half as long, which is worth testing against the gate and the form. The single tablet session is an outlier.

Where the 64 visitors went

Measured by distinct people, not events. Each step is the number of visitors who reached it at least once during the period.

Three quarters of visitors scroll, but only a quarter open a product. In event terms the last step is starker still: **11 registration starts produced 2 completions — 82% abandonment inside the form.**

THE FUNNEL BY PRODUCT SCREEN

SCREEN	PRODUCT VIEWS	GATE SHOWN	GATE CLICKED	FORM STARTED	REGISTRATION STARTED
ETI	42	—	—	—	—
AMC	19	19	5	3	7
Deals	—	24	3	5	—
Funds (EN)	4	—	—	—	—
Fondi (IT)	3	—	—	—	—
Home	—	—	—	7	4

Event counts. The single most actionable finding in this report: **ETI generates the most interest and offers no next step**, while AMC is the only product that carries a visitor from view to registration.

THE DEALS GATE IS BEING SHOWN, NOT TAKEN

Deals produced **24 gate impressions to only 5 people** — the same visitors meeting the same wall repeatedly — converting into 3 clicks and 3 abandonments. A gate seen five times per person and clicked once is asking for commitment before it has given a reason.

HIGH-INTENT ACTIONS RECORDED

ACTION	EVENTS	VISITORS
Registration completed	2	2
Access request sent	4	4
Deals access request	1	1
Call requested (submitted)	1	1
Product info requested	2	1

About **8 qualified enquiries** in forty days from ~30 real visitors: a good rate, far too small a volume.

What to do next

Seven actions, ordered by the size of the gap they close. The first three are changes to the site itself; the rest are measurement and demand.

1 Put an access gate and a call-to-action on ETI

HIGHEST IMPACT

SITE CHANGE

ETI attracts more attention than any other product and currently ends in a dead end. Give it the same gate, registration prompt and “request a term sheet” path that AMC has.

Evidence: 42 product views · 11 visitors · 0 gate impressions · 0 registration starts.

2 Rebuild the registration form around completion

HIGHEST IMPACT

SITE CHANGE

Cut the form to the minimum an institutional contact will give on a first approach, show progress, and add field-level events so the abandoning step is visible next month rather than inferred.

Evidence: 11 registration starts → 2 completions (82% abandonment); 15 form starts across three screens.

3 Give the Deals gate something to earn

HIGHEST IMPACT

SITE CHANGE

Preview one or two live deals — name, structure, headline terms — before requiring registration, and stop re-showing the gate to a visitor who has already declined it in the same session.

Evidence: 24 gate impressions to 5 visitors · 3 clicks · 3 abandonments.

4 Filter internal traffic and mark key events as conversions

MEASUREMENT

Add an internal-traffic filter for the Malta office IPs and a bot exclusion, then mark *registration_complete*, *access_request* and *call_request_submit* as key events so they appear in standard GA4 reports. Link Search Console to see which queries actually reach the site.

Evidence: 24% of sessions from Malta (6 people); 25 visitors from Amsterdam and Dublin with one session each and no engagement.

5 Create demand — the site has no acquisition channel

HIGHEST IMPACT

MARKETING

Nothing currently brings new people to the site. A targeted LinkedIn programme to family offices and wealth managers, distribution of the Insights articles through the Framont network, and partner referral links would each produce measurable channels within a month.

Evidence: 0 referral, 0 paid, 0 social, 0 email sessions; weekly sessions down ~58% from the July peak; no traffic after 14 August.

6 Detect language automatically

SITE CHANGE

Serve Italian to Italian browsers by default and keep the manual switch as an override. A third of the audience is Italian and currently has to find the toggle.

Evidence: 15 manual language switches by 11 visitors; Fondi (IT) 40 views vs Funds (EN) 29.

7 Promote Insights instead of publishing more of it

CONTENT

The articles are good — one reader spent nearly three minutes on the ETI guide — but almost nobody reaches them. Link them from the product screens they explain, and use them as the LinkedIn payload before writing anything new.

Evidence: 33 of 479 page views (6.9%); five articles drew 8 views between them.

WHAT TO LOOK FOR IN THE NEXT REPORT

MEASURE	NOW	TARGET NEXT CYCLE	DEPENDS ON
Registration completion rate	18%	50%	Recommendation 2
Products with a conversion path	2 of 5	5 of 5	Recommendation 1
Acquisition channels with traffic	2	4+	Recommendation 5
External visitors per week	~8	40+	Recommendations 5 & 7
Qualified enquiries	8 in 40 days	8 per month	All of the above

Targets are deliberately modest: on a base this small the goal for the next cycle is a working funnel and a measurable acquisition channel, not volume.

THE NEXT FORTY DAYS

Two of these seven actions would change the shape of this report by the next cycle. Giving ETI a conversion path turns the site's strongest source of interest into enquiries, and rebuilding the registration form stops losing the people who have already decided they want in. Everything else — filters, language, content, demand — makes the numbers truer or bigger; those two make them work.

How to read this report

METHOD

- All figures come from the Google Analytics 4 Data API, property 544861486, web stream G-YRE5XX3RN2 (access.framontmanagement.com), pulled on 17 August 2026.
- Period: 9 July – 17 August 2026 — the full life of the data stream, which was created 9 July 2026. No earlier data exists.
- Dates and sessions follow the property's time zone, Europe/Malta.
- Funnel steps are counted as distinct visitors reaching a step at least once; the by-product table counts events.

CAVEATS

- **Small sample.** 64 visitors and 118 sessions. Percentages indicate direction; a single person moves them by 1.6 points.
- **Internal traffic is not filtered.** Malta contributes 24% of sessions from 6 people.
- **Likely automated traffic.** 25 visitors from Amsterdam and Dublin and 2 from Ashburn, Virginia show one session each with no engagement — a cloud-hosting signature.
- **Single-page application.** Product screens share the URL “/” and are separated by page title, so URL-level reporting understates product depth.
- **Partial final days.** 15–17 August recorded no traffic; 17 August is also incomplete.
